1 Main Page

This document is a software referece description of the API provided by the i.MX8 HSM solutions.

2 Revision History

Revision 0.1: 29/03/2019 Savari preliminary draft - subject to change
Revision 0.8: 20/05/2019 Adding butterfly key expansion operation; adding signature, rng, hash services.

3 General concepts related to the API

3.1 Session

The API must be initialized by a potential requestor by opening a session.

The session establishes a route (MU, DomainID...) between the requestor and the HSM, and grants the usage of a specified key store through a password authentication.

When a session is opened, the HSM returns a handle identifying the session to the requestor.

3.2 Service flow

For a given category of services, the requestor is expected to open a service flow by invoking the appropriate HSM API. The session handle, as well as the control data needed for the service flow are provided as parameters of the call. Upon reception of the open request, the HSM allocates a context in which the session handle, as well as the provided control parameters are stored. The context is preserved until the service flow is closed by the user and it is used by the HSM to proceed with the sub-sequent operations requested by the user on the service flow.

4 Module Index

4.1 Modules

Here is a list of all modules:

Hsm_api	2
----------------	--------------------------

5 Class Index

5.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

op_generate_key_args_t	32
open_session_args_t	34
open_svc_key_management_args_t	34
open_svc_key_store_args_t	35

6 Module Documentation

6.1 Hsm_api

i.MX8 HSM API header file

Classes

- struct [open_session_args_t](#)
- struct [open_svc_key_store_args_t](#)
- struct [open_svc_key_management_args_t](#)
- struct [op_generate_key_args_t](#)

- `typedef uint32_t hsm_verification_status_t`
- `typedef uint32_t hsm_addr_msb_t`
- `typedef uint32_t hsm_addr_lsb_t`

Enumerations

```

• enum hsm_err_t {
    HSM_NO_ERROR = 0x0,
    HSM_INVALID_MESSAGE = 0x1,
    HSM_INVALID_ADDRESS = 0x2,
    HSM_UNKNOWN_ID = 0x3,
    HSM_INVALID_PARAM = 0x4,
    HSM_NVM_ERROR = 0x5,
    HSM_OUT_OF_MEMORY = 0x6,
    HSM_UNKNOWN_HANDLE = 0x7,
    HSM_UNKNOWN_KEY_STORE = 0x8,
    HSM_KEY_STORE_AUTH = 0x9,
    HSM_KEY_STORAGE_ERROR = 0xA,
    HSM_ID_CONFLICT = 0xB,
    HSM_RNG_NOT_STARTED = 0xC,
    HSM_CMD_NOT_SUPPORTED = 0xD,
    HSM_INVALID_LIFECYCLE = 0xE,
    HSM_KEY_STORE_CONFLICT = 0xF,
    HSM_GENERAL_ERROR = 0xFF }

```

Error codes returned by HSM functions.

Functions

- `hsm_err_t hsm_open_session (open_session_args_t *args, hsm_hdl_t *session_hdl)`
- `hsm_err_t hsm_close_session (hsm_hdl_t session_hdl)`
- `hsm_err_t hsm_open_key_store_service (hsm_hdl_t session_hdl, open_svc_key_store_args_t *args, hsm_hdl_t *key_store_hdl)`
- `hsm_err_t hsm_close_key_store_service (hsm_hdl_t key_store_hdl)`
- `hsm_err_t hsm_open_key_management_service (hsm_hdl_t key_store_hdl, open_svc_key_management_args_t *args, hsm_hdl_t *key_management_hdl)`
- `hsm_err_t hsm_generate_key (hsm_hdl_t key_management_hdl, op_generate_key_args_t args)`
- `hsm_err_t hsm_manage_key (hsm_hdl_t key_management_hdl, uint32_t key_identifier, hsm_addr_lsb_t key, uint16_t key_size, hsm_key_type_t key_type, hsm_key_info_t key_info, hsm_op_manage_key_flags_t flags)`
- `hsm_err_t hsm_butterfly_key_expansion (hsm_hdl_t key_management_hdl, uint32_t key_identifier, hsm_addr_lsb_t add_data_1, hsm_addr_lsb_t add_data_2, hsm_addr_lsb_t multiply_data, uint16_t data_1_size, uint16_t data_2_size, uint16_t multiply_data_size, uint32_t dest_key_identifier, hsm_addr_lsb_t output, uint32_t output_size, hsm_op_but_key_exp_flags_t flags)`
- `hsm_err_t hsm_close_key_management_service (hsm_hdl_t key_management_hdl)`
- `hsm_err_t hsm_open_cipher_service (hsm_hdl_t key_store_hdl, hsm_addr_msb_t input_address_ext, hsm_addr_msb_t output_address_ext, hsm_svc_cipher_flags_t flags, hsm_hdl_t *cipher_hdl)`
- `hsm_err_t hsm_cipher_one_go (hsm_hdl_t cipher_hdl, uint32_t key_identifier, hsm_addr_lsb_t input, hsm_addr_lsb_t output, hsm_addr_lsb_t iv, uint32_t input_size, uint32_t output_size, uint32_t iv_size, hsm_op_cipher_one_go_algo_t cipher_algo, hsm_op_cipher_one_go_flags_t flags)`
- `hsm_err_t hsm_close_cipher_service (hsm_hdl_t cipher_hdl)`
- `hsm_err_t hsm_open_signature_generation_service (hsm_hdl_t key_store_hdl, hsm_addr_msb_t input_address_ext, hsm_addr_msb_t output_address_ext, hsm_svc_signature_flags_t flags, hsm_hdl_t *signature_gen_hdl)`
- `hsm_err_t hsm_signature_generation (hsm_hdl_t signature_gen_hdl, uint32_t key_identifier, hsm_signature_scheme_id_t scheme_id, hsm_addr_lsb_t message, hsm_addr_lsb_t signature, uint32_t message_size, uint32_t signature_size, hsm_op_signature_gen_flags_t flags)`
- `hsm_err_t hsm_close_signature_generation_service (hsm_hdl_t signature_gen_hdl)`
- `hsm_err_t hsm_open_fast_signature_generation_service (hsm_hdl_t key_store_hdl, hsm_addr_msb_t input_address_ext, hsm_addr_msb_t output_address_ext, uint32_t key_identifier, hsm_signature_scheme_id_t scheme_id, hsm_svc_fast_signature_generation_flags_t flags, hsm_hdl_t *fast_signature_gen_hdl)`

- `hsm_err_t hsm_hash_one_go` (`hsm_hdl_t` hash_hdl, `hsm_addr_lsb_t` input, `hsm_addr_lsb_t` output, `uint32_t` input_size, `uint32_t` output_size, `hsm_hash_algo_t` algo)
- `hsm_err_t hsm_close_hash_service` (`hsm_hdl_t` hash_hdl)

6.1.1 Detailed Description

i.MX8 HSM API header file

6.1.2 Macro Definition Documentation

6.1.2.1 HSM_SVC_KEY_STORE_FLAGS_CREATE

```
#define HSM_SVC_KEY_STORE_FLAGS_CREATE ((hsm_svc_key_store_flags_t) (1 << 0))
```

It must be specified to create a new key storage

6.1.2.2 HSM_SVC_KEY_STORE_FLAGS_UPDATE

```
#define HSM_SVC_KEY_STORE_FLAGS_UPDATE ((hsm_svc_key_store_flags_t) (1 << 1))
```

6.1.2.3 HSM_SVC_KEY_STORE_FLAGS_DELETE

```
#define HSM_SVC_KEY_STORE_FLAGS_DELETE ((hsm_svc_key_store_flags_t) (1 << 3))
```

6.1.2.4 HSM_KEY_TYPE_ECDSA_NIST_P224

```
#define HSM_KEY_TYPE_ECDSA_NIST_P224 ((hsm_key_type_t) 0x01)
```

6.1.2.5 HSM_KEY_TYPE_ECDSA_NIST_P256

```
#define HSM_KEY_TYPE_ECDSA_NIST_P256 ((hsm_key_type_t) 0x02)
```

6.1.2.6 HSM_KEY_TYPE_ECDSA_NIST_P384

```
#define HSM_KEY_TYPE_ECDSA_NIST_P384 ((hsm_key_type_t) 0x03)
```

6.1.2.7 HSM_KEY_TYPE_ECDSA_BRAINPOOL_R1_224

```
#define HSM_KEY_TYPE_ECDSA_BRAINPOOL_R1_224 ((hsm_key_type_t) 0x12)
```

6.1.2.8 HSM_KEY_TYPE_ECDSA_BRAINPOOL_R1_256

```
#define HSM_KEY_TYPE_ECDSA_BRAINPOOL_R1_256 ((hsm_key_type_t) 0x13)
```

6.1.2.9 HSM_KEY_TYPE_ECDSA_BRAINPOOL_R1_384

```
#define HSM_KEY_TYPE_ECDSA_BRAINPOOL_R1_384 ((hsm_key_type_t) 0x15)
```

6.1.2.10 HSM_KEY_TYPE_ECDSA_BRAINPOOL_T1_224

```
#define HSM_KEY_TYPE_ECDSA_BRAINPOOL_T1_224 ((hsm_key_type_t) 0x22)
```

6.1.2.11 HSM_KEY_TYPE_ECDSA_BRAINPOOL_T1_256

```
#define HSM_KEY_TYPE_ECDSA_BRAINPOOL_T1_256 ((hsm_key_type_t) 0x23)
```

6.1.2.12 HSM_KEY_TYPE_ECDSA_BRAINPOOL_T1_384

```
#define HSM_KEY_TYPE_ECDSA_BRAINPOOL_T1_384 ((hsm_key_type_t)0x25)
```

6.1.2.13 HSM_KEY_TYPE_AES_128

```
#define HSM_KEY_TYPE_AES_128 ((hsm_key_type_t)0x30)
```

6.1.2.14 HSM_KEY_TYPE_AES_192

```
#define HSM_KEY_TYPE_AES_192 ((hsm_key_type_t)0x31)
```

6.1.2.15 HSM_KEY_TYPE_AES_256

```
#define HSM_KEY_TYPE_AES_256 ((hsm_key_type_t)0x32)
```

6.1.2.16 HSM_KEY_INFO_PERMANENT

```
#define HSM_KEY_INFO_PERMANENT ((hsm_key_info_t)(1 << 0))
```

When set, the key is permanent. Once created, it will not be possible to update or delete the key anymore. This bit can never be reset.

6.1.2.17 HSM_OP_KEY_GENERATION_FLAGS_UPDATE

```
#define HSM_OP_KEY_GENERATION_FLAGS_UPDATE ((hsm_op_key_gen_flags_t)(1 << 0))
```

User can replace an existing key only by generating a key with the same type of the original one.

6.1.2.18 HSM_OP_KEY_GENERATION_FLAGS_CREATE_PERSISTENT

```
#define HSM_OP_KEY_GENERATION_FLAGS_CREATE_PERSISTENT ((hsm_op_key_gen_flags_t)(1 << 1))
```

Persistent keys are saved in the non volatile memory.

6.1.2.19 HSM_OP_KEY_GENERATION_FLAGS_CREATE_TRANSIENT

```
#define HSM_OP_KEY_GENERATION_FLAGS_CREATE_TRANSIENT ((hsm_op_key_gen_flags_t)(1 << 2))
```

Transient keys are deleted when the corresponding key store service flow is closed.

6.1.2.20 HSM_OP_KEY_GENERATION_FLAGS_STRICT_OPERATION

```
#define HSM_OP_KEY_GENERATION_FLAGS_STRICT_OPERATION ((hsm_op_key_gen_flags_t) (1 << 7))
```

The request is completed only when the new key has been written in the NVM. This applicable for persistent key only.

6.1.2.21 HSM_OP_MANAGE_KEY_FLAGS_UPDATE

```
#define HSM_OP_MANAGE_KEY_FLAGS_UPDATE ((hsm_op_manage_key_flags_t) (1 << 0))
```

6.1.2.22 HSM_OP_MANAGE_KEY_FLAGS_DELETE

```
#define HSM_OP_MANAGE_KEY_FLAGS_DELETE ((hsm_op_manage_key_flags_t) (1 << 1))
```

6.1.2.23 HSM_OP_MANAGE_KEY_FLAGS_STRICT_OPERATION

```
#define HSM_OP_MANAGE_KEY_FLAGS_STRICT_OPERATION ((hsm_op_manage_key_flags_t) (1 << 7))
```

The request is completed only when the modification has been written in the NVM. This applicable for persistent key only.

6.1.2.24 HSM_CIPHER_ONE_GO_ALGO_AES_ECB

```
#define HSM_CIPHER_ONE_GO_ALGO_AES_ECB ((hsm_op_cipher_one_go_algo_t) (0x00))
```

6.1.2.25 HSM_CIPHER_ONE_GO_ALGO_AES_CBC

```
#define HSM_CIPHER_ONE_GO_ALGO_AES_CBC ((hsm_op_cipher_one_go_algo_t) (0x01))
```

6.1.2.26 HSM_CIPHER_ONE_GO_ALGO_AES_CCM

```
#define HSM_CIPHER_ONE_GO_ALGO_AES_CCM ((hsm_op_cipher_one_go_algo_t) (0x02))
```

Perform AES CCM with following prerequisites:

- Adata = 0 - There is no associated data
- Tlen = 16 bytes

6.1.4 Enumeration Type Documentation

6.1.4.1 hsm_err_t

```
enum hsm_err_t
```

Error codes returned by HSM functions.

Enumerator

HSM_NO_ERROR	Success.
HSM_INVALID_MESSAGE	The received message is invalid or unknown.
HSM_INVALID_ADDRESS	The provided address is invalid or doesn't respect the API requirements.
HSM_UNKNOWN_ID	The provided identifier is not known.
HSM_INVALID_PARAM	One of the parameter provided in the command is invalid.
HSM_NVM_ERROR	NVM generic issue.
HSM_OUT_OF_MEMORY	There is not enough memory to handle the requested operation.
HSM_UNKNOWN_HANDLE	Unknown session/service handle.
HSM_UNKNOWN_KEY_STORE	The key store identified by the provided "key store Id" doesn't exist and the "create" flag is not set.
HSM_KEY_STORE_AUTH	Key storage authentication fails.
HSM_KEY_STORAGE_ERROR	An error occurred in the key storage internal processing.
HSM_ID_CONFLICT	An element (key storage, key. . .) with the provided ID already exists.
HSM_RNG_NOT_STARTED	The internal RNG is not started.
HSM_CMD_NOT_SUPPORTED	The functionality is not supported for the current session/service/key store configuration.
HSM_INVALID_LIFECYCLE	Invalid lifecycle for requested operation.
HSM_KEY_STORE_CONFLICT	A key store with the same attributes already exists.
HSM_GENERAL_ERROR	Error not covered by other codes occurred.

6.1.5 Function Documentation

6.1.5.1 hsm_open_session()

```
hsm_err_t hsm_open_session (
    open_session_args_t * args,
    hsm_hdl_t * session_hdl )
```

Initiate a HSM session.

Parameters

<i>args</i>	pointer to the structure containing the specific function arguments.
<i>session_hdl</i>	pointer to where the session handle must be written.

Returns

error_code error code.

6.1.5.2 hsm_close_session()

```
hsm_err_t hsm_close_session (
    hsm_hdl_t session_hdl )
```

Terminate a previously opened HSM session

Parameters

<i>session_hdl</i>	pointer to the handle identifying the session to be closed.
--------------------	---

Returns

`error_code` error code.

6.1.5.3 hsm_open_key_store_service()

```
hsm_err_t hsm_open_key_store_service (
    hsm_hdl_t session_hdl,
    open_svc_key_store_args_t * args,
    hsm_hdl_t * key_store_hdl )
```

Open a service flow on the specified key store.

Parameters

<i>session_hdl</i>	pointer to the handle indentifying the current session.
<i>args</i>	pointer to the structure containing the specific function arugments.
<i>key_store_hdl</i>	pointer to where the key store service flow handle must be written.

Returns

`error_code` error code.

6.1.5.4 hsm_close_key_store_service()

```
hsm_err_t hsm_close_key_store_service (
    hsm_hdl_t key_store_hdl )
```

Close a previously opened key store service flow.

Parameters

<i>handle</i>	indentifying the key store service flow to be closed.
---------------	---

Returns

`error_code` error code.

6.1.5.5 hsm_open_key_management_service()

```
hsm_err_t hsm_open_key_management_service (
    hsm_hdl_t key_store_hdl,
    open_svc_key_management_args_t * args,
    hsm_hdl_t * key_management_hdl )
```

Open a key management service flow

User must open this service in order to perform operation on the key store content: key generate, delete, update

Parameters

<i>key_store_hdl</i>	handle indentifying the key store service flow.
<i>args</i>	pointer to the structure containing the specific function arugments.
<i>key_management_hdl</i>	pointer to where the key management service flow handle must be written.

Returns

error_code error code.

6.1.5.6 hsm_generate_key()

```
hsm_err_t hsm_generate_key (
    hsm_hdl_t key_management_hdl,
    op_generate_key_args_t args )
```

Generate a key or a key pair in the key store. In case of asymetic keys, the public key can optionally be exported. The generated key can be stored in a new or in an existing key slot with the restriction that an existing key can be replaced only by a key of the same type.

User can call this function only after having opened a key management service flow

Parameters

<i>key_management_hdl</i>	handle identifying the key management service flow.
<i>args</i>	pointer to the structure containing the specific function arugments.

Returns

error code

6.1.5.7 hsm_manage_key()

```
hsm_err_t hsm_manage_key (
    hsm_hdl_t key_management_hdl,
    uint32_t key_identifier,
    hsm_addr_lsb_t key,
    uint16_t key_size,
```

```

hsm_key_type_t key_type,
hsm_key_info_t key_info,
hsm_op_manage_key_flags_t flags )

```

This command is designed to perform operation on an existing key.
User can call this function only after having opened a key management service flow

Parameters

<i>key_management_hdl</i>	handle identifying the key management service flow.
<i>key_identifier</i>	identifier of the key to be used for the operation.
<i>key_address</i>	LSB of the address in the requester space where the new key value can be found. Not checked in case of delete operation.
<i>key_size</i>	length in bytes of the input key area. Not checked in case of delete operation.
<i>key_type</i>	indicates the type of the key to be managed.
<i>key_info</i>	bitmap specifying the properties of the key, it will replace the existing value. Not checked in case of delete operation..
<i>flags</i>	bitmap specifying the operation properties

Returns

error code

6.1.5.8 hsm_butterfly_key_expansion()

```

hsm_err_t hsm_butterfly_key_expansion (
    hsm_hdl_t key_management_hdl,
    uint32_t key_identifier,
    hsm_addr_lsb_t add_data_1,
    hsm_addr_lsb_t add_data_2,
    hsm_addr_lsb_t multiply_data,
    uint16_t data_1_size,
    uint16_t data_2_size,
    uint16_t multiply_data_size,
    uint32_t dest_key_identifier,
    hsm_addr_lsb_t output,
    uint32_t output_size,
    hsm_op_but_key_exp_flags_t flags )

```

This command is designed to perform the butterfly key expansion operation on an ECC private key in case of implicit certificate. Optionally the resulting public key is exported.
User can call this function only after having opened a key management service flow

The following operation is performed: $\text{ButKey} = (\text{Key} + \text{AddData1}) * \text{MultiplyData} + \text{AddData2} \pmod{n}$

Parameters

<i>key_management_hdl</i>	handle identifying the key store management service flow.
<i>key_identifier</i>	identifier of the key to be used for the operation.
<i>add_data_1</i>	LSB of the address in the requester space where the add_data_1 input can be found value 0 in case of explicit certificate expansion function $f_1(k, i, j)$ result value in case of implicit certificate.

Parameters

<i>add_data_2</i>	LSB of the address in the requester space where the add_data_2 input can be found expansion function f1/f2(k, i, j) result value in case of explicit certificate the private reconstruction value used in the derivation of the pseudonym ECC key in case of implicit certificate
<i>multiply_data</i>	LSB of the address in the requester space where the multiply_data input can be found value 1 in case of explicit certificate the hash value used to in the derivation of the pseudonym ECC key
<i>data_1_size</i>	length in bytes of the add_data_1 input
<i>data_2_size</i>	length in bytes of the add_data_2 input
<i>multiply_data_size</i>	length in bytes of the multiply_data input
<i>output</i>	LSB of the address in the requester space where the public key must be written.
<i>output_size</i>	length in bytes of the output area, if the size is 0, no key is copied in the output.
<i>flags</i>	bitmap specifying the operation properties

Returns

error code

6.1.5.9 hsm_close_key_management_service()

```
hsm_err_t hsm_close_key_management_service (
    hsm_hdl_t key_management_hdl )
```

Terminate a previously opened key management service flow

Parameters

<i>key_management_hdl</i>	handle identifying the key management service flow.
---------------------------	---

Returns

error code

6.1.5.10 hsm_open_cipher_service()

```
hsm_err_t hsm_open_cipher_service (
    hsm_hdl_t key_store_hdl,
    hsm_addr_msb_t input_address_ext,
    hsm_addr_msb_t output_address_ext,
    hsm_svc_cipher_flags_t flags,
    hsm_hdl_t * cipher_hdl )
```

Open a cipher service flow

User can call this function only after having opened a key store service flow. User must open this service in order to perform cipher operations.

Parameters

<i>key_store_hdl</i>	handle indentifying the key store service flow.
<i>input_address_ext</i>	most significant 32 bits address to be used by HSM for input memory transactions in the requester address space for the operations handled by the service flow.
<i>output_address_ext</i>	most significant 32 bits address to be used by HSM for output memory transactions in the requester address space for the opeartion handled by the service flow.
<i>flags</i>	bitmap indicating the service flow properties - not supported in current release, any value accepted.
<i>error_code</i>	pointer to where the error code should be written.
<i>chiper_hdl</i>	pointer to where the cipher service flow handle must be written.

Returns

error code

6.1.5.11 hsm_cipher_one_go()

```
hsm_err_t hsm_cipher_one_go (
    hsm_hdl_t chiper_hdl,
    uint32_t key_identifier,
    hsm_addr_lsb_t input,
    hsm_addr_lsb_t output,
    hsm_addr_lsb_t iv,
    uint32_t input_size,
    uint32_t output_size,
    uint32_t iv_size,
    hsm_op_cipher_one_go_algo_t cipher_algo,
    hsm_op_cipher_one_go_flags_t flags )
```

Perform ciphering operation

User can call this function only after having opened a cipher service flow

Parameters

<i>chiper_hdl</i>	handle identifying the cipher service flow.
<i>key_identifier</i>	identifier of the key to be used for the operation
<i>input</i>	LSB of the address in the requester space where the input to be processed can be found plaintext for encryption ciphertext for decryption (tag is concatenated for CCM)
<i>output</i>	LSB of the address in the requester space where the output must be stored ciphertext for encryption (tag is concatenated for CCM) plaintext for decryption
<i>iv</i>	LSB of the address in the requester space where the initialization vector can be found
<i>input_size</i>	length in bytes of the input
<i>iv_size</i>	length in bytes of the initialization vector it must be 0 for algorithms not using the initialization vector. It must be 12 for AES in CCM mode
<i>cipher_algo</i>	algorithm to be used for the operation
<i>flags</i>	bitmap specifying the operation attributes

Returns

error code

6.1.5.12 hsm_close_cipher_service()

```
hsm_err_t hsm_close_cipher_service (
    hsm_hdl_t chipper_hdl )
```

Terminate a previously opened cipher service flow

Parameters

<i>chipper_hdl</i>	pointer to handle identifying the cipher service flow to be closed.
--------------------	---

Returns

error code

6.1.5.13 hsm_open_signature_generation_service()

```
hsm_err_t hsm_open_signature_generation_service (
    hsm_hdl_t key_store_hdl,
    hsm_addr_msb_t input_address_ext,
    hsm_addr_msb_t output_address_ext,
    hsm_svc_signature_flags_t flags,
    hsm_hdl_t * signature_gen_hdl )
```

Open a signature generation service flow

User can call this function only after having opened a key store service flow. User must open this service in order to perform signature generation operations.

Parameters

<i>key_store_hdl</i>	handle indentifying the key store service flow.
<i>input_address_ext</i>	most significant 32 bits address to be used by HSM for input memory transactions in the requester address space for the operations handled by the service flow.
<i>output_address_ext</i>	most significant 32 bits address to be used by HSM for output memory transactions in the requester address space for the opeartion handled by the service flow.
<i>flags</i>	bitmap indicating the service flow properties - not supported in current release, any value accepted.
<i>error_code</i>	pointer to where the error code should be written.
<i>signature_gen_hdl</i>	pointer to where the signature generation service flow handle must be written.

Returns

error code

6.1.5.14 hsm_signature_generation()

```
hsm_err_t hsm_signature_generation (
    hsm_hdl_t signature_gen_hdl,
    uint32_t key_identifier,
    hsm_signature_scheme_id_t scheme_id,
    hsm_addr_lsb_t message,
    hsm_addr_lsb_t signature,
    uint32_t message_size,
    uint32_t signature_size,
    hsm_op_signature_gen_flags_t flags )
```

Generate a digital signature according to the signature scheme

User can call this function only after having opened a signature generation service flow

Parameters

<i>signature_gen_hdl</i>	handle identifying the signature generation service flow
<i>key_identifier</i>	identifier of the key to be used for the operation
<i>scheme_id</i>	identifier of the digital signature scheme to be used for the operation
<i>message</i>	LSB of the address in the requester space where the input (message or message digest) to be processed can be found
<i>signature</i>	LSB of the address in the requester space where the signature must be stored the signature $S=(c,d)$ is stored as $c d lsb_y$ in case of compressed point signature, $c d$ otherwise.
<i>message_size</i>	length in bytes of the input
<i>signature_size</i>	length in bytes of the output - it must contains additional 32bits where to store the R_y last significant bit
<i>flags</i>	bitmap specifying the operation attributes

Returns

error code

6.1.5.15 hsm_close_signature_generation_service()

```
hsm_err_t hsm_close_signature_generation_service (
    hsm_hdl_t signature_gen_hdl )
```

Terminate a previously opened signature generation service flow

Parameters

<i>signature_gen_hdl</i>	handle identifying the signature generation service flow to be closed.
--------------------------	--

Returns

error code

6.1.5.16 hsm_open_fast_signature_generation_service()

```
hsm_err_t hsm_open_fast_signature_generation_service (
    hsm_hdl_t key_store_hdl,
    hsm_addr_msb_t input_address_ext,
    hsm_addr_msb_t output_address_ext,
    uint32_t key_identifier,
    hsm_signature_scheme_id_t scheme_id,
    hsm_svc_fast_signature_generation_flags_t flags,
    hsm_hdl_t * fast_signature_gen_hdl )
```

Open a fast signature generation service flow

User can call this function only after having opened a key store service flow. User must open this service in order to perform several signature generation by using the same private key.

Parameters

<i>key_store_hdl</i>	handle indentifying the key store service flow.
<i>input_address_ext</i>	most significant 32 bits address to be used by HSM for input memory transactions in the requester address space for the operations handled by the service flow.
<i>output_address_ext</i>	most significant 32 bits address to be used by HSM for output memory transactions in the requester address space for the opeartion handled by the service flow.
<i>key_identifier</i>	identifier of the private key to be used for the subsequent operations
<i>flags</i>	bitmap indicating the service flow properties - not supported in current release, any value accepted.
<i>fast_signature_gen_hdl</i>	pointer to where the fast signature generation service flow handle must be written.

Returns

error code

6.1.5.17 hsm_fast_signature_generation()

```
hsm_err_t hsm_fast_signature_generation (
    hsm_hdl_t fast_signature_gen_hdl,
    hsm_addr_lsb_t message,
    hsm_addr_lsb_t signature,
    uint32_t message_size,
    uint32_t signature_size,
    hsm_op_fast_signature_gen_flags_t flags )
```

Generate a digital signature according to the signature scheme

User can call this function only after having opened a fast signature generation service flow (key_identifier is omitted in the command)

Parameters

<i>fast_signature_gen_hdl</i>	handle identifying the fast signature generation service flow
<i>scheme_id</i>	identifier of the digital signature scheme to be used for the operation
<i>message</i>	LSB of the address in the requester space where the input to be processed (message or message digest) can be found.

Parameters

<i>signature</i>	LSB of the address in the requester space where the signature must be stored the signature S=(c,d) is stored as c d sb_y in case of compressed point signature, c d otherwise.
<i>message_size</i>	length in bytes of the input
<i>signature_size</i>	length in bytes of the output - In case of compressed point signature additional 32bit must be provided.
<i>flags</i>	bitmap specifying the operation attributes

Returns

error code

6.1.5.18 hsm_close_fast_signature_generation_service()

```
hsm_err_t hsm_close_fast_signature_generation_service (
    hsm_hdl_t fast_signature_gen_hdl )
```

Terminate a previously opened fast signature generation service flow

Parameters

<i>fast_signature_gen_hdl</i>	handle identifying the signature service flow to be closed.
-------------------------------	---

Returns

error code

6.1.5.19 hsm_open_signature_verification_service()

```
hsm_err_t hsm_open_signature_verification_service (
    hsm_hdl_t session_hdl,
    hsm_addr_msb_t input_address_ext,
    hsm_addr_msb_t output_address_ext,
    hsm_svc_signature_flags_t flags,
    hsm_hdl_t * signature_ver_hdl )
```

Open a signature verification service flow

User can call this function only after having opened a session. User must open this service in order to perform signature verification operations.

Parameters

<i>session_hdl</i>	handle identifying the current session.
<i>input_address_ext</i>	most significant 32 bits address to be used by HSM for input memory transactions in the requester address space for the operations handled by the service flow.

Parameters

<i>output_address_ext</i>	most significant 32 bits address to be used by HSM for output memory transactions in the requester address space for the operation handled by the service flow.
<i>flags</i>	bitmap indicating the service flow properties - not supported in current release, any value accepted.
<i>error_code</i>	pointer to where the error code should be written.
<i>signature_ver_hdl</i>	pointer to where the signature verification service flow handle must be written.

Returns

error code

6.1.5.20 hsm_signature_verification()

```
hsm_err_t hsm_signature_verification (
    hsm_hdl_t signature_ver_hdl,
    hsm_addr_lsb_t key_address,
    hsm_signature_scheme_id_t scheme_id,
    hsm_addr_lsb_t message,
    hsm_addr_lsb_t signature,
    uint32_t message_size,
    uint32_t signature_size,
    hsm_verification_status_t * status,
    hsm_op_signature_ver_flags_t flags )
```

Verify a digital signature according to the signature scheme

User can call this function only after having opened a signature verification service flow

Parameters

<i>signature_ver_hdl</i>	handle identifying the signature verification service flow.
<i>key_address</i>	pointer to the key to be used for the operation
<i>key_identifier</i>	identifier of the key to be used for the operation
<i>ecc_domain_id</i>	identifier of the supported ECC domains to be used for the operation
<i>message</i>	LSB of the address in the requester space where the input (message or message digest) to be processed can be found
<i>signature</i>	LSB of the address in the requester space where the signature can be found the signature S=(c,d) must be in the format c d.
<i>message_size</i>	length in bytes of the input
<i>signature_size</i>	length in bytes of the output - it must contains additional 32bits where to store the Ry last significant bit
<i>status</i>	pointer to where the verification status must be stored if the verification succeed the value HSM_OP_SIGNATURE_VERIFICATION_STATUS_SUCCESS is returned.
<i>flags</i>	bitmap specifying the operation attributes

Returns

error code

6.1.5.21 hsm_close_signature_verification_service()

```
hsm_err_t hsm_close_signature_verification_service (
    hsm_hdl_t signature_ver_hdl )
```

Terminate a previously opened signature verification service flow

Parameters

<i>signature_ver_hdl</i>	handle identifying the signature verification service flow to be closed.
--------------------------	--

Returns

error code

6.1.5.22 hsm_open_fast_signature_verification_service()

```
hsm_err_t hsm_open_fast_signature_verification_service (
    hsm_hdl_t session_hdl,
    hsm_addr_msb_t input_address_ext,
    hsm_addr_msb_t output_address_ext,
    hsm_addr_msb_t key_address_ext,
    hsm_addr_lsb_t key_address,
    hsm_svc_fast_signature_verification_flags_t flags,
    hsm_signature_scheme_id_t scheme_id,
    hsm_hdl_t * fast_signature_ver_hdl )
```

Open a fast signature verification service flow

User can call this function only after having opened a session. User must open this service in order to perform several signature verification by using the same public key.

Parameters

<i>session_hdl</i>	handle indentifying the current session.
<i>input_address_ext</i>	most significant 32 bits address to be used by HSM for input memory transactions in the requester address space for the operations handled by the service flow.
<i>output_address_ext</i>	most significant 32 bits address to be used by HSM for output memory transactions in the requester address space for the opeartion handled by the service flow.
<i>key_identifier</i>	identifier of the private key to be used for the subsequent operations
<i>flags</i>	bitmap indicating the service flow properties - not supported in current release, any value accepted.
<i>fast_signature_ver_hdl</i>	pointer to where the fast signature verification service flow handle must be written.

Returns

error code

6.1.5.23 hsm_fast_signature_verification()

```
hsm_err_t hsm_fast_signature_verification (
    hsm_hdl_t fast_signature_ver_hdl,
    hsm_addr_lsb_t message,
    hsm_addr_lsb_t signature,
    uint32_t message_size,
    uint32_t signature_size,
    hsm_verification_status_t * status,
    hsm_op_fast_signature_ver_flags_t flags )
```

Verify a digital signature according to the signature scheme

User can call this function only after having opened a signature service flow

Parameters

<i>signature_hdl</i>	handle identifying the signature service flow.
<i>key_address</i>	pointer to the key to be used for the operation
<i>key_identifier</i>	identifier of the key to be used for the operation
<i>ecc_domain_id</i>	identifier of the supported ECC domains to be used for the operation
<i>message</i>	LSB of the address in the requester space where the input to be processed (message or message digest) can be found.
<i>signature</i>	message LSB of the address in the requester space where the signature can be found must be stored the signature S=(c,d) must be in the c d format.
<i>message_size</i>	length in bytes of the input
<i>signature_size</i>	length in bytes of the signature.
<i>status</i>	pointer to where the verification status must be stored if the verification succeed the value HSM_OP_SIGNATURE_VERIFICATION_STATUS_SUCCESS is returned.
<i>flags</i>	bitmap specifying the operation attributes.

Returns

error code

6.1.5.24 hsm_close_fast_signature_verification_service()

```
hsm_err_t hsm_close_fast_signature_verification_service (
    hsm_hdl_t fast_signature_ver_hdl )
```

Terminate a previously opened fast signature verification service flow

Parameters

<i>fast_signature_ver_hdl</i>	handle identifying the fast signature verification service flow to be closed.
-------------------------------	---

Returns

error code

6.1.5.25 hsm_open_rng_service()

```
hsm_err_t hsm_open_rng_service (
    hsm_hdl_t session_hdl,
    hsm_addr_msb_t input_address_ext,
    hsm_addr_msb_t output_address_ext,
    hsm_svc_rng_flags_t flags,
    hsm_hdl_t * rng_hdl )
```

Open a random number generation service flow

User can call this function only after having opened a session. User must open this service in order to perform rng operations.

Parameters

<i>session_hdl</i>	handle indentifying the current session.
<i>input_address_ext</i>	most significant 32 bits address to be used by HSM for input memory transactions in the requester address space for the operations handled by the service flow.
<i>output_address_ext</i>	most significant 32 bits address to be used by HSM for output memory transactions in the requester address space for the opeartion handled by the service flow.
<i>flags</i>	bitmap indicating the service flow properties
<i>rng_hdl</i>	pointer to where the rng service flow handle must be written.

Returns

error code

6.1.5.26 hsm_rng_get_random()

```
hsm_err_t hsm_rng_get_random (
    hsm_hdl_t rng_hdl,
    hsm_addr_lsb_t output,
    uint32_t output_size )
```

Get a freshly generated random number

User can call this function only after having opened a rng service flow

Parameters

<i>rng_hdl</i>	handle identifying the rng service flow.
<i>output</i>	LSB of the address in the requester space where random number must be stored.
<i>output_size</i>	length of the random number in bytes

Returns

error code

6.1.5.27 hsm_close_rng_service()

```
hsm_err_t hsm_close_rng_service (
    hsm_hdl_t rng_hdl )
```

Terminate a previously opened rng service flow

Parameters

<i>rng_hdl</i>	handle identifying the rng service flow to be closed.
----------------	---

Returns

error code

6.1.5.28 hsm_open_hash_service()

```
hsm_err_t hsm_open_hash_service (
    hsm_hdl_t session_hdl,
    hsm_addr_msb_t input_address_ext,
    hsm_addr_msb_t output_address_ext,
    hsm_svc_hash_flags_t flags,
    hsm_hdl_t * hash_hdl )
```

Open an hash service flow

User can call this function only after having opened a session. User must open this service in order to perform an hash operations.

Parameters

<i>session_hdl</i>	handle indentifying the current session.
<i>input_address_ext</i>	most significant 32 bits address to be used by HSM for input memory transactions in the requester address space for the operations handled by the service flow.
<i>output_address_ext</i>	most significant 32 bits address to be used by HSM for output memory transactions in the requester address space for the opeartion handled by the service flow.
<i>flags</i>	bitmap indicating the service flow properties
<i>hash_hdl</i>	pointer to where the hash service flow handle must be written.

Returns

error code

6.1.5.29 hsm_hash_one_go()

```
hsm_err_t hsm_hash_one_go (
    hsm_hdl_t hash_hdl,
    hsm_addr_lsb_t input,
    hsm_addr_lsb_t output,
    uint32_t input_size,
    uint32_t output_size,
    hsm_hash_algo_t algo )
```

Perform the hash operation on a given input

User can call this function only after having opened a hash service flow

Parameters

<i>hash_hdl</i>	handle identifying the hash service flow.
<i>input</i>	LSB of the address in the requester space where message to be hashed can be found.
<i>output</i>	LSB of the address in the requester space where the resulting hash must be stored.
<i>input_size</i>	length in bytes of the input
<i>output_size</i>	length in bytes of the output.
<i>algo</i>	algorithm to be used for the operation

Returns

error code

6.1.5.30 hsm_close_hash_service()

```
hsm_err_t hsm_close_hash_service (
    hsm_hdl_t hash_hdl )
```

Terminate a previously opened hash service flow

Parameters

<i>hash_hdl</i>	handle identifying the hash service flow to be closed.
-----------------	--

Returns

error code

7 Class Documentation

7.1 op_generate_key_args_t Struct Reference

Public Attributes

- uint32_t [key_identifier](#)

pointer to the identifier of the key to be used for the operation. In case of create operation the new key identifier will be stored in this location.

- `uint16_t output_size`
length in bytes of the output area, if the size is 0, no key is copied in the output.
- `hsm_op_key_gen_flags_t flags`
bitmap specifying the operation properties.
- `hsm_key_type_t key_type`
indicates which type of key must be generated.
- `hsm_key_info_t key_info`
bitmap specifying the properties of the key.

7.1.1 Member Data Documentation

7.1.1.1 key_identifier

`uint32_t op_generate_key_args_t::key_identifier`

pointer to the identifier of the key to be used for the operation. In case of create operation the new key identifier will be stored in this location.

7.1.1.2 output_size

`uint16_t op_generate_key_args_t::output_size`

length in bytes of the output area, if the size is 0, no key is copied in the output.

7.1.1.3 flags

`hsm_op_key_gen_flags_t op_generate_key_args_t::flags`

bitmap specifying the operation properties.

7.1.1.4 key_type

`hsm_key_type_t op_generate_key_args_t::key_type`

indicates which type of key must be generated.

7.1.1.5 key_info

`hsm_key_info_t op_generate_key_args_t::key_info`

bitmap specifying the properties of the key.

7.2 open_session_args_t Struct Reference

Public Attributes

- [uint8_t session_priority](#)
*not supported in current release, any value accepted. */*
- [uint8_t operating_mode](#)
*not supported in current release, any value accepted. */*
- [uint16_t rsv](#)

7.2.1 Member Data Documentation

7.2.1.1 session_priority

`uint8_t open_session_args_t::session_priority`

not supported in current release, any value accepted. */

7.2.1.2 operating_mode

`uint8_t open_session_args_t::operating_mode`

not supported in current release, any value accepted. */

7.2.1.3 rsv

`uint16_t open_session_args_t::rsv`

7.3 open_svc_key_management_args_t Struct Reference

Public Attributes

- [hsm_addr_msb_t input_address_ext](#)
most significant 32 bits address to be used by HSM for input memory transactions in the requester address space for the commands handled by the service flow.
- [hsm_addr_msb_t output_address_ext](#)
most significant 32 bits address to be used by HSM for output memory transactions in the requester address space for the commands handled by the service flow.
- [hsm_svc_key_management_flags_t flags](#)
bitmap specifying the services properties.
- [uint8_t rsv](#) [3]

7.3.1 Member Data Documentation

7.3.1.1 input_address_ext

`hsm_addr_msb_t open_svc_key_management_args_t::input_address_ext`

most significant 32 bits address to be used by HSM for input memory transactions in the requester address space for the commands handled by the service flow.

7.3.1.2 output_address_ext

`hsm_addr_msb_t open_svc_key_management_args_t::output_address_ext`

most significant 32 bits address to be used by HSM for output memory transactions in the requester address space for the commands handled by the service flow.

7.3.1.3 flags

`hsm_svc_key_management_flags_t open_svc_key_management_args_t::flags`

bitmap specifying the services properties.

7.3.1.4 rsv

`uint8_t open_svc_key_management_args_t::rsv[3]`

7.4 open_svc_key_store_args_t Struct Reference

Public Attributes

- `uint32_t key_store_identifier`
user defined id identifying the key store./*
- `uint32_t authentication_nonce`
user defined nonce used as authentication proof for accesing the key storage./*
- `uint16_t max_updates_number`
maximum number of updates authorized for the storage. Valid only for create operation./*
- `hsm_svc_key_store_flags_t flags`
bitmap specifying the services properties./*
- `uint8_t rsv`

7.4.1 Member Data Documentation

7.4.1.1 key_store_identifier

`uint32_t open_svc_key_store_args_t::key_store_identifier`

user defined id identifying the key store.*/

7.4.1.2 authentication_nonce

`uint32_t open_svc_key_store_args_t::authentication_nonce`

user defined nonce used as authentication proof for accesing the key storage. */

7.4.1.3 max_updates_number

`uint16_t open_svc_key_store_args_t::max_updates_number`

maximum number of updates authorized for the storage. Valid only for create operation. */

7.4.1.4 flags

`hsm_svc_key_store_flags_t open_svc_key_store_args_t::flags`

bitmap specifying the services properties. */

7.4.1.5 rsv
