2.1 Error codes

Enumerations

- enum [she_err_t](#) {
[ERC_NO_ERROR](#) = 0x0,
[ERC_SEQUENCE_ERROR](#) = 0x1,
[ERC_KEY_NOT_AVAILABLE](#) = 0x2,
[ERC_KEY_INVALID](#) = 0x3,
[ERC_KEY_EMPTY](#) = 0x4,
[ERC_NO_SECURE_BOOT](#) = 0x5,
[ERC_KEY_WRITE_PROTECTED](#) = 0x6,
[ERC_KEY_UPDATE_ERROR](#) = 0x7,

```
ERC_RNG_SEED = 0x8,  
ERC_NO_DEBUGGING = 0x9,  
ERC_BUSY = 0xA,  
ERC_MEMORY_FAILURE = 0xB,  
ERC_GENERAL_ERROR = 0xC }
```

2.1.1 Detailed Description

Error codes returned by SHE functions.

2.1.2 Enumeration Type Documentation

2.1.2.1 she_err_t

```
enum she_err_t
```

Enumerator

ERC_NO_ERROR	Success.
ERC_SEQUENCE_ERROR	Invalid sequence of commands.
ERC_KEY_NOT_AVAILABLE	Key is locked.
ERC_KEY_INVALID	Key not allowed for the given operation.
ERC_KEY_EMPTY	Key has not been initialized yet.
ERC_NO_SECURE_BOOT	Conditions for a secure boot process are not met.
ERC_KEY_WRITE_PROTECTED	Memory slot for this key has been write-protected.
ERC_KEY_UPDATE_ERROR	Key update did not succeed due to errors in verification of the messages.
ERC_RNG_SEED	The seed has not been initialized.
ERC_NO_DEBUGGING	Internal debugging is not possible.
ERC_BUSY	A function of SHE is called while another function is still processing.
ERC_MEMORY_FAILURE	Memory error (e.g. flipped bits)
ERC_GENERAL_ERROR	Error not covered by other codes occurred.

2.2 SHE keys

Macros

- `#define SHE_KEY_1 (0x04)`
- `#define SHE_KEY_2 (0x05)`
- `#define SHE_KEY_3 (0x06)`
- `#define SHE_KEY_4 (0x07)`
- `#define SHE_KEY_5 (0x08)`
- `#define SHE_KEY_6 (0x09)`
- `#define SHE_KEY_7 (0x0a)`
- `#define SHE_KEY_8 (0x0b)`
- `#define SHE_KEY_9 (0x0c)`
- `#define SHE_KEY_10 (0x0d)`
- `#define SHE_RAM_KEY (0x0e)`

2.2.1 Detailed Description

Identifiers for SHE keys.

2.3 SHE+ key extension

Macros

- `#define SHE_KEY_DEFAULT (0x00)`
- `#define SHE_KEY_N_EXT_1 (0x10)`
- `#define SHE_KEY_N_EXT_2 (0x20)`
- `#define SHE_KEY_N_EXT_3 (0x30)`
- `#define SHE_KEY_N_EXT_4 (0x40)`

2.3.1 Detailed Description

Identifiers for the SHE key extension.

2.3.2 Macro Definition Documentation

2.3.2.1 SHE_KEY_DEFAULT

```
#define SHE_KEY_DEFAULT (0x00)
```

no key extension: keys from 0 to 10 as defined in SHE specification.

2.3.2.2 SHE_KEY_N_EXT_1

```
#define SHE_KEY_N_EXT_1 (0x10)
```

keys 11 to 20.

2.3.2.3 SHE_KEY_N_EXT_2

```
#define SHE_KEY_N_EXT_2 (0x20)
```

keys 21 to 30.

2.3.2.4 SHE_KEY_N_EXT_3

```
#define SHE_KEY_N_EXT_3 (0x30)
```

keys 31 to 40.

2.3.2.5 SHE_KEY_N_EXT_4

```
#define SHE_KEY_N_EXT_4 (0x40)
```

keys 41 to 50.

2.4 Key store provisioning

Macros

- `#define SHE_STORAGE_CREATE_SUCCESS 0u`
- `#define SHE_STORAGE_CREATE_WARNING 1u`
- `#define SHE_STORAGE_CREATE_UNAUTHORIZED 2u`
- `#define SHE_STORAGE_CREATE_FAIL 3u`
- `#define SHE_STORAGE_NUMBER_UPDATES_DEFAULT 300u`

Functions

- `uint32_t she_storage_create` (`uint32_t key_storage_identifier`, `uint32_t authentication_nonce`, `uint16_t max_updates_number`, `uint8_t *signed_message`, `uint32_t msg_len`)

2.4.1 Detailed Description

2.4.2 Macro Definition Documentation

2.4.2.1 SHE_STORAGE_CREATE_SUCCESS

```
#define SHE_STORAGE_CREATE_SUCCESS 0u
```

New storage created successfully.

2.4.2.2 SHE_STORAGE_CREATE_WARNING

```
#define SHE_STORAGE_CREATE_WARNING 1u
```

New storage created but its usage is restricted to a limited security state of the chip.

2.4.2.3 SHE_STORAGE_CREATE_UNAUTHORIZED

```
#define SHE_STORAGE_CREATE_UNAUTHORIZED 2u
```

Creation of the storage is not authorized.

2.4.2.4 SHE_STORAGE_CREATE_FAIL

```
#define SHE_STORAGE_CREATE_FAIL 3u
```

Creation of the storage failed for any other reason.

2.4.2.5 SHE_STORAGE_NUMBER_UPDATES_DEFAULT

```
#define SHE_STORAGE_NUMBER_UPDATES_DEFAULT 300u
```

default number of maximum number of updated for SHE storage.

2.4.3 Function Documentation

2.4.3.1 `she_storage_create()`

```
uint32_t she_storage_create (
    uint32_t key_storage_identifier,
    uint32_t authentication_nonce,
    uint16_t max_updates_number,
    uint8_t * signed_message,
    uint32_t msg_len )
```

Creates an empty SHE storage.

Must be called at least once on every device before using any other SHE API.

A signed message must be provided to replace an existing key store. This message is not necessary under some conditions related to chip's lifecycle.

Note that the signed message is not yet supported. should be forced to NULL.

Parameters

<i>key_storage_identifier</i>	key store identifier
<i>authentication_nonce</i>	user defined nonce to be used as authentication proof for accesing the key store.
<i>max_updates_number</i>	maximum number of updates authorized on this new storage. This parameter has the goal to limit the occupation of the monotonic counter used as anti-rollback protection. If the maximum number of updates is reached, SHE still allows key store updates but without updating the monotonic counter giving the opportunity for rollback attacks. Always forced to 300 in the current release.
<i>signed_message</i>	pointer to a signed message authorizing the operation (NULL if no signed message to be used)
<i>msg_len</i>	length in bytes of the signed message

Returns

error code

2.5 Session

Functions

- struct she_hdl_s * [she_open_session](#) (uint32_t key_storage_identifier, uint32_t authentication_nonce, void(*async_cb)(void *priv, [she_err_t](#) err), void *priv)
- void [she_close_session](#) (struct she_hdl_s *hdl)

2.5.1 Detailed Description

2.5.2 Function Documentation

2.5.2.1 she_open_session()

```
struct she_hdl_s* she_open_session (
    uint32_t key_storage_identifier,
    uint32_t authentication_nonce,
    void(*) (void *priv, she\_err\_t err) async_cb,
    void * priv )
```

Initiate a SHE session. The returned session handle pointer is typed with the struct "she_hdl_s".

The user doesn't need to know or to access the fields of this struct.

It only needs to store this pointer and pass it to every calls to other APIs within the same SHE session.

Note that asynchronous API is currently not supported. async_cb and priv pointers must be set to NULL.

Parameters

<i>key_storage_identifier</i>	key store identifier
<i>authentication_nonce</i>	user defined nonce used as authentication proof for accesing the key store..
<i>async_cb</i>	user callback to be called on completion of a SHE operation
<i>priv</i>	user pointer to be passed to the callback

Returns

pointer to the session handle.

2.5.2.2 she_close_session()

```
void she_close_session (
    struct she_hdl_s * hdl )
```

Terminate a previously opened SHE session

Parameters

<i>hdl</i>	pointer to the session handler to be closed.
------------	--

2.6 MAC

Macros

- `#define SHE_MAC_SIZE 16u`
- `#define SHE_MAC_VERIFICATION_SUCCESS 0u`
- `#define SHE_MAC_VERIFICATION_FAILED 1u`

Functions

- `she_err_t she_cmd_generate_mac` (struct she_hdl_s *hdl, uint8_t key_ext, uint8_t key_id, uint16_t message_length, uint8_t *message, uint8_t *mac)
- `she_err_t she_cmd_verify_mac` (struct she_hdl_s *hdl, uint8_t key_ext, uint8_t key_id, uint16_t message_length, uint8_t *message, uint8_t *mac, uint8_t mac_length, uint8_t *verification_status)

2.6.1 Detailed Description

2.6.2 Macro Definition Documentation

2.6.2.1 SHE_MAC_SIZE

```
#define SHE_MAC_SIZE 16u
```

size of the MAC generated is 128bits.

2.6.2.2 SHE_MAC_VERIFICATION_SUCCESS

```
#define SHE_MAC_VERIFICATION_SUCCESS 0u
```

indication of mac verification success

2.6.2.3 SHE_MAC_VERIFICATION_FAILED

```
#define SHE_MAC_VERIFICATION_FAILED 1u
```

indication of mac verification failure

2.6.3 Function Documentation

2.6.3.1 she_cmd_generate_mac()

```
she_err_t she_cmd_generate_mac (  
    struct she_hdl_s * hdl,  
    uint8_t key_ext,  
    uint8_t key_id,  
    uint16_t message_length,  
    uint8_t * message,  
    uint8_t * mac )
```

Generates a MAC of a given message with the help of a key identified by key_id.

Parameters

<i>hdl</i>	pointer to the SHE session handler
<i>key_ext</i>	identifier of the key extension to be used for the operation
<i>key_id</i>	identifier of the key to be used for the operation
<i>message_length</i>	length in bytes of the input message. The message is padded to be a multiple of 128 bits by SHE.
<i>message</i>	pointer to the message to be processed
<i>mac</i>	pointer to where the output MAC should be written (128bits should be allocated there)

Returns

error code

2.6.3.2 she_cmd_verify_mac()

```
she_err_t she_cmd_verify_mac (
    struct she_hdl_s * hdl,
    uint8_t key_ext,
    uint8_t key_id,
    uint16_t message_length,
    uint8_t * message,
    uint8_t * mac,
    uint8_t mac_length,
    uint8_t * verification_status )
```

Verifies the MAC of a given message with the help of a key identified by key_id.

Parameters

<i>hdl</i>	pointer to the SHE session handler
<i>key_ext</i>	identifier of the key extension to be used for the operation
<i>key_id</i>	identifier of the key to be used for the operation
<i>message_length</i>	length in bytes of the input message. The message is padded to be a multiple of 128 bits by SHE.
<i>message</i>	pointer to the message to be processed
<i>mac</i>	pointer to the MAC to be compared (implicitly 128 bits)
<i>mac_length</i>	number of bytes to compare (must be at least 4)
<i>verification_status</i>	pointer to where write the result of the MAC comparison

Returns

error code

2.7 AES-CBC

Macros

- `#define SHE_AES_BLOCK_SIZE_128 16u`

Functions

- `she_err_t she_cmd_enc_cbc` (struct she_hdl_s *hdl, uint8_t key_ext, uint8_t key_id, uint32_t data_length, uint8_t *iv, uint8_t *plaintext, uint8_t *ciphertext)
- `she_err_t she_cmd_dec_cbc` (struct she_hdl_s *hdl, uint8_t key_ext, uint8_t key_id, uint32_t data_length, uint8_t *iv, uint8_t *ciphertext, uint8_t *plaintext)

2.7.1 Detailed Description

2.7.2 Macro Definition Documentation

2.7.2.1 SHE_AES_BLOCK_SIZE_128

```
#define SHE_AES_BLOCK_SIZE_128 16u
```

size in bytes of a 128bits CBC block

2.7.3 Function Documentation

2.7.3.1 she_cmd_enc_cbc()

```
she_err_t she_cmd_enc_cbc (
    struct she_hdl_s * hdl,
    uint8_t key_ext,
    uint8_t key_id,
    uint32_t data_length,
    uint8_t * iv,
    uint8_t * plaintext,
    uint8_t * ciphertext )
```

CBC encryption of a given plaintext with the key identified by key_id.

Parameters

<i>hdl</i>	pointer to the SHE session handler
<i>key_ext</i>	identifier of the key extension to be used for the operation
<i>key_id</i>	identifier of the key to be used for the operation
<i>data_length</i>	length in bytes of the plaintext and the ciphertext. Must be a multiple of 128bits.
<i>iv</i>	pointer to the 128bits IV to use for the encryption.
<i>plaintext</i>	pointer to the message to be encrypted.
<i>ciphertext</i>	pointer to ciphertext output area.

Returns

error code

2.7.3.2 she_cmd_dec_cbc()

```
she_err_t she_cmd_dec_cbc (
    struct she_hdl_s * hdl,
    uint8_t key_ext,
    uint8_t key_id,
    uint32_t data_length,
    uint8_t * iv,
    uint8_t * ciphertext,
    uint8_t * plaintext )
```

CBC decryption of a given ciphertext with the key identified by key_id.

Parameters

<i>hdl</i>	pointer to the SHE session handler
<i>key_ext</i>	identifier of the key extension to be used for the operation
<i>key_id</i>	identifier of the key to be used for the operation
<i>data_length</i>	length in bytes of the plaintext and the ciphertext. Must be a multiple of 128bits.
<i>iv</i>	pointer to the 128bits IV to use for the decryption.
<i>ciphertext</i>	pointer to ciphertext to be decrypted.
<i>plaintext</i>	pointer to the plaintext output area.

Returns

error code

2.8 AES-ECB

Macros

- `#define SHE_KEY_SIZE 16u` /** SHE keys are 128 bits (16 bytes) long. */

Functions

- [she_err_t she_cmd_enc_ecb](#) (struct she_hdl_s *hdl, uint8_t key_ext, uint8_t key_id, uint8_t *plaintext, uint8_t *ciphertext)
- [she_err_t she_cmd_dec_ecb](#) (struct she_hdl_s *hdl, uint8_t key_ext, uint8_t key_id, uint8_t *ciphertext, uint8_t *plaintext)
- [she_err_t she_cmd_load_key](#) (struct she_hdl_s *hdl, uint8_t key_ext, uint8_t key_id, uint8_t *m1, uint8_t *m2, uint8_t *m3, uint8_t *m4, uint8_t *m5)
- [she_err_t she_cmd_load_plain_key](#) (struct she_hdl_s *hdl, uint8_t *key)

2.8.1 Detailed Description

2.8.2 Function Documentation

2.8.2.1 she_cmd_enc_ecb()

```
she_err_t she_cmd_enc_ecb (
    struct she_hdl_s * hdl,
    uint8_t key_ext,
    uint8_t key_id,
    uint8_t * plaintext,
    uint8_t * ciphertext )
```

ECB encryption of a given plaintext with the key identified by key_id.

Parameters

<i>hdl</i>	pointer to the SHE session handler
<i>key_ext</i>	identifier of the key extension to be used for the operation
<i>key_id</i>	identifier of the key to be used for the operation
<i>plaintext</i>	pointer to the 128bits message to be encrypted.
<i>ciphertext</i>	pointer to ciphertext output area (128bits).

Returns

error code

2.8.2.2 she_cmd_dec_ecb()

```
she_err_t she_cmd_dec_ecb (
    struct she_hdl_s * hdl,
```

```

uint8_t key_ext,
uint8_t key_id,
uint8_t * ciphertext,
uint8_t * plaintext )

```

ECB decryption of a given ciphertext with the key identified by key_id.

Parameters

<i>hdl</i>	pointer to the SHE session handler
<i>key_ext</i>	identifier of the key extension to be used for the operation
<i>key_id</i>	identifier of the key to be used for the operation
<i>ciphertext</i>	pointer to 128bits ciphertext to be decrypted.
<i>plaintext</i>	pointer to the plaintext output area (128bits).

Returns

error code

2.8.2.3 she_cmd_load_key()

```

she_err_t she_cmd_load_key (
    struct she_hdl_s * hdl,
    uint8_t key_ext,
    uint8_t key_id,
    uint8_t * m1,
    uint8_t * m2,
    uint8_t * m3,
    uint8_t * m4,
    uint8_t * m5 )

```

Update an internal key of SHE with the protocol specified by SHE.

Parameters

<i>hdl</i>	pointer to the SHE session handler
<i>key_ext</i>	identifier of the key extension to be used for the operation
<i>key_id</i>	identifier of the key to be used for the operation
<i>m1</i>	pointer to M1 message - 128 bits
<i>m2</i>	pointer to M2 message - 256 bits
<i>m3</i>	pointer to M3 message - 128 bits
<i>m4</i>	pointer to the output address for M4 message - 256 bits
<i>m5</i>	pointer to the output address for M5 message - 128 bits

Returns

error code

2.8.2.4 she_cmd_load_plain_key()

```
she_err_t she_cmd_load_plain_key (
    struct she_hdl_s * hdl,
    uint8_t * key )
```

Load a key as plaintext to the RAM_KEY slot without encryption and verification.

Parameters

<i>hdl</i>	pointer to the SHE session handler
<i>key</i>	pointer to the plaintext key to be loaded - 128bits

Returns

error code

2.9 Key export

Functions

- [she_err_t she_cmd_export_ram_key](#) (struct she_hdl_s *hdl, uint8_t *m1, uint8_t *m2, uint8_t *m3, uint8_t *m4, uint8_t *m5)

2.9.1 Detailed Description

2.9.2 Function Documentation

2.9.2.1 she_cmd_export_ram_key()

```
she_err_t she_cmd_export_ram_key (
    struct she_hdl_s * hdl,
    uint8_t * m1,
    uint8_t * m2,
    uint8_t * m3,
    uint8_t * m4,
    uint8_t * m5 )
```

exports the RAM_KEY into a format protected by SECRET_KEY.

Parameters

<i>hdl</i>	pointer to the SHE session handler
<i>m1</i>	pointer to the output address for M1 message - 128 bits
<i>m2</i>	pointer to the output address for M2 message - 256 bits
<i>m3</i>	pointer to the output address for M3 message - 128 bits
<i>m4</i>	pointer to the output address for M4 message - 256 bits
<i>m5</i>	pointer to the output address for M5 message - 128 bits

Returns

error code

2.10 RNG

Macros

- `#define SHE_ENTROPY_SIZE 16u`
- `#define SHE_RND_SIZE 16u`

Functions

- [she_err_t she_cmd_init_rng](#) (struct she_hdl_s *hdl)
- [she_err_t she_cmd_extend_seed](#) (struct she_hdl_s *hdl, uint8_t *entropy)
- [she_err_t she_cmd_rnd](#) (struct she_hdl_s *hdl, uint8_t *rnd)

2.10.1 Detailed Description

2.10.2 Function Documentation

2.10.2.1 she_cmd_init_rng()

```
she_err_t she_cmd_init_rng (  
    struct she_hdl_s * hdl )
```

initializes the seed and derives a key for the PRNG. The function must be called before CMD_RND after every power cycle/reset.

Parameters

<i>hdl</i>	pointer to the SHE session handler
------------	------------------------------------

Returns

error code

2.10.2.2 she_cmd_extend_seed()

```
she_err_t she_cmd_extend_seed (  
    struct she_hdl_s * hdl,  
    uint8_t * entropy )
```

extends the seed of the PRNG by compressing the former seed value and the supplied entropy into a new seed which will be used to generate the following random numbers. The random number generator has to be initialized by CMD_INIT_RNG before the seed can be extended.

Parameters

<i>hdl</i>	pointer to the SHE session handler
<i>entropy</i>	pointer to the entropy vector (128bits) to use for the operation

Returns

error code

2.10.2.3 she_cmd_rnd()

```
she_err_t she_cmd_rnd (  
    struct she_hdl_s * hdl,  
    uint8_t * rnd )
```

returns a vector of 128 random bits. The random number generator has to be initialized by CMD_INIT_RNG before random numbers can be supplied.

Parameters

<i>hdl</i>	pointer to the SHE session handler
<i>rnd</i>	pointer to the output address for the generated 128bits random vector

Returns

error code

2.11 Status Register

Functions

- [she_err_t she_cmd_get_status](#) (struct she_hdl_s *hdl, uint8_t *sreg)

2.11.1 Detailed Description

2.11.2 Function Documentation

2.11.2.1 she_cmd_get_status()

```
she_err_t she_cmd_get_status (
    struct she_hdl_s * hdl,
    uint8_t * sreg )
```

returns the content of the status register

Parameters

<i>hdl</i>	pointer to the SHE session handler
<i>sreg</i>	pointer to the output address for status register(8bits)

Returns

error code

2.12 UID

Macros

- `#define SHE_CHALLENGE_SIZE 16u /* 128 bits */`
- `#define SHE_ID_SIZE 15u /* 120 bits */`

Functions

- `she_err_t she_cmd_get_id` (struct she_hdl_s *hdl, uint8_t *challenge, uint8_t *id, uint8_t *sreg, uint8_t *mac)

2.12.1 Detailed Description

2.12.2 Function Documentation

2.12.2.1 she_cmd_get_id()

```
she_err_t she_cmd_get_id (
    struct she_hdl_s * hdl,
    uint8_t * challenge,
    uint8_t * id,
    uint8_t * sreg,
    uint8_t * mac )
```

returns the identity (UID) and the value of the status register protected by a MAC over a challenge and the data.

Parameters

<i>hdl</i>	pointer to the SHE session handler
<i>challenge</i>	pointer to the challenge vector (128bits)
<i>id</i>	pointer to the output address for the identity (120bits)
<i>sreg</i>	pointer to the output address for status register(8bits)
<i>mac</i>	pointer to the output address for the computed MAC (128bits)

Returns

error code

2.13 Cancel

Functions

- [she_err_t she_cmd_cancel](#) (struct she_hdl_s *hdl)

2.13.1 Detailed Description

2.13.2 Function Documentation

2.13.2.1 she_cmd_cancel()

```
she_err_t she_cmd_cancel (  
    struct she_hdl_s * hdl )
```

interrupt any given function and discard all calculations and results.

Parameters

<i>hdl</i>	pointer to the SHE session handler
------------	------------------------------------

Returns

error code
